Cincinnati Airways provides helicopter service from the city's convenient downtown garage rooftop Western Southern Heliport.

A Sikorsky S-61 helicopter brings supplies to an offshore oil drilling rig in the North Sea. Typical of thousands around the world, serving the oil industry.

AEROSPACE INDUSTRIES ASSOCIATION

1725 DeSales Street, N.W., Washington, D.C. 20036

Above, California's Emeryville Municipal Heliport. SFO Helicopter Airlines provides scheduled service to Oakland, San Francisco International Airports and other area heliports -- fast transportation for the nearby Holiday Inn and Sheraton guests. Below, in Jersey City, New Jersey, the Journal Square Transportation Center's rooftop heliport.

1975
 DIRECTORY OF HELIPORTS
 IN THE
 UNITED STATES, CANADA AND PUERTO RICO

This 1975 Directory, compiled by the Aerospace Industries Association, reveals a continued increase in the number of heliports. The number grew to 3,268 up 8.3 percent over the 1974 total of 3,014. Of these, 3,268 heliports, 2,989 are at ground level and 279 are rooftop facilities.

Directory information is provided by State Aeronautics Department and Commissions, the Federal Aviation Administration, the Canada Map Office, Department of Mines and Resources, the Commonwealth of Puerto Rico, helicopter operators and manufacturers.

Hospital heliports now number 571, a 15.8 percent increase over the 487 in 1974. The exceptional growth in this category is pointed up by the fact that a decade earlier there were only 34 hospital heliports. (See HOSPITAL HELIPORTS -- pages 243-258)

New city ordinances in Chicago and Los Angeles focused attention on the need for more city-center, suburban and hospital heliports to permit greater utilization of the versatile civil helicopter. These ordinances required that buildings above a certain height -- 75 feet in Chicago and 80 feet in Los Angeles be provided rooftop emergency landing facilities for helicopters -- when the only way out is up! Today's ground fire-fighting equipment can not reach above 8 floors -- the helicopter can.

Of the 3,268 heliports, only 635 are public-use facilities, while 2,633 are for private or prior permission use only. However, these, as well as government facilities such as police, fire, forest service heliports, are of course, available for rescues and other emergencies.

There is the continuing, growing need for public-use heliports. A heliport should be a part of any building (auditoriums, government, hotels, hospitals, offices, medical, sports and shopping centers) built today. Failure to include plans for a heliport in the design of any major structure could limit the usefulness of the building or even make it obsolete.

TEXAS

St. Joseph Hospital
Bryan,

G L O S S A R Y

Approach and Departure Paths: an obstruction-free path for flight in a plane leading outward and upward from the edge of the take-off and landing area under which adequate areas may have to be located to permit a safe landing in the event of an emergency.

Autotation: a power-off flight condition when the engine is not driving the main and tail rotor systems. The main rotor is driven only by the action of the relative wind providing a means to maneuver to a safe, low speed landing in an emergency. Autotation is a built-in safety factor, the equivalent of a power-off glide in an airplane.

Downwash: a variable volume of air moved downward by the rotating main rotor, resulting in a flow or airblast spilling outward as the air strikes the ground and is re-circulated by the main rotor.

Ground Effect: an improvement in flight capability that develops whenever the helicopter flies or hovers near the ground or other surface. It results from the cushion of denser air built up between the ground and the helicopter by the air displaced downward by the rotor.

Helicopter: a rotary-wing aircraft that depends principally upon the lift generated by one or more power-driven rotors rotating on substantially vertical axes for its support and motion in the air. The helicopter can hover, fly backward and sideways, in addition to forward flight. A helicopter is a V/STOL -- a vertical and/or short take-off and landing aircraft.

Heliport: an area, either at ground level or elevated on a structure, that is used for the landing and takeoff of helicopters. It can be a minimum facility or it can include some or all of the various facilities useful to helicopter operation such as helicopter parking, hangar, waiting room, fueling and maintenance equipment.

Off-Heliport-Landing Site: a take-off and landing area intended for temporary or occasional helicopter use but not formally designated as a heliport.

Peripheral Area: a safety zone that provides an obstruction-free area on all sides of the landing and take-off area.

Taxiing: a powered movement of an aircraft one area to another, usually just before takeoff or after landing. Helicopters equipped with skid-type landing gear are taxied in a hovering position a few feet above the ground; this is known as air or hover taxiing. Larger helicopters are usually equipped with wheel landing gear; such ships can ground taxi as well as hover taxi.

Touchdown Pad: that part of the landing or takeoff area where is designated that the helicopter alight.

* * * *

An airplane lands and then stops -- a helicopter stops and then lands.

HELIPORT CHECK LIST

1. Recognize the need for a heliport.
2. Review governmental regulations -- city, county, state and federal -- regarding zoning city planning, building codes, ordinances, etc. to assure proper compliance.
3. Select a suitable heliport site or sites.
4. Contact a local helicopter or helicopter manufacturer's representative to check the operational feasibility of the proposed site.
5. Submit the required prior notice of proposed heliport development to the Federal Aviation Administration (FAA) Airports District office.
6. Discuss with helicopter operators and FAA representatives the selection of air routes and operating procedures.
7. Consult qualified architect or engineer to ensure compliance with design, construction and technical requirements.
8. And if required, submit application on proposed helicopter operations and heliport location for license or approval together with request for local re-zoning if needed.

This is a suggested check list to follow in establishing a heliport or helistop. As situations vary in different parts of the country, all these suggested steps may not be necessary. For example, a ground level area on a parking lot or lawn or an open rooftop area may be available requiring none or a minimum construction. In many instances, the area need only be marked, fenced and a wind sock installed.

Banking by helicopter, means money in the bank. In downtown Philadelphia, one of the First Pennsylvania Bank's two JetRangers lands on the rooftop heliport with bags of checks and drafts from its 32 branches and 20 correspondent banks for overnight processing.

The Excavation Construction, Inc.'s hangar heliport at the company's Bladensburg, MD office. Below: The Cobo Hall Convention Center's heliport in Detroit MI (the open deck area adjacent to the 1200-car roof parking) will be the world's largest public heliport.
