AEROSPACE INDUSTRIES ASSOCIATION
1725 DeSales Street, N.W., Washington, D.C. 20036
Two views of the rooftop heliport on the new World Trade Center Building in downtown New York City. This 50' by 55' facility is for business use by the Port Authority of New York/New Jersey, as well as for emergency evacuations when the only way out is up.
This 1977 Directory, compiled by the Aerospace Industries Association, reveals a continued increase in the number of heliports, reflecting not only greater activity in traditional employment of the helicopter, but also a growing variety of business uses and destinations. For example, in addition to the hospital, police/fire departments, there are heliports at banks, breweries, shopping centers, vineyards, race tracks, stadiums, publishing companies, newspapers, TV and radio stations, assembly plants, convention centers, museums, raceways, hotels, motels, department stores, colleges, universities, city halls, utility, insurance, steel, construction and mining companies, cosmetic firms, prison farms and, of course, The White House.

In 1977, the number grew to 3,433 up 5.0% over the 1975 total of 3,268. Of these, 3,433 heliports, 289 are rooftop and 3,134 are ground level facilities. In addition, there are heliports on the 80 working mobile oil rigs and 2,060 oil platforms in the Gulf of Mexico and more off the California and Alaskan coasts. The U.S. Forest Service maintains approximately 300 heliports and several thousand unimproved heliports around the country.

Hospita! heliports now number 699, an 88.4% increase over the 571 reported in 1975 and a 1,000% increase over the 1965 total of 34. (See Hospital Heliports -- page 269-270).

Of the 3,433 heliports listed, only 417 are public use facilities. Only those airport/heliports reported by the State agencies are included. This is reflected in the adjustment of the public heliport total.

There are 3,016 heliports for private or prior permission use only. These, as well as government facilities, are, of course, available for rescue and other emergencies.

But, needed now are more public heliports. City center ground level or rooftop facilities are essential to permit the point-to-point transportation above ground traffic and below airline traffic which only the helicopter can provide. Today a metropolitan area without public heliports is missing out on the full potential of a balanced and complete transportation system. Heliports should be a part of any public use building built today. Chicago and Los Angeles City ordinances now require rooftop emergency helicopter landing areas on high rise buildings -- when the only way out is up.

Directory information is provided by the State Departments of Transportation or Aeronautics Commissions, the Federal Aviation Administration, the Canada Map Office, Department of Mines and Resources and the Puerto Authority, Commonwealth of Puerto Rico.

The Toronto Hospital for Sick Children was the first in Canada to provide a heliport. Here a ambulance helicopter lands on this downtown rooftop facility.

In Newport Beach, California the Hoag Memorial Hospital Heliport is used by both civil and military rescue helicopters.
GLOSSARY

Approach and Departure Paths: an obstruction-free path for flight in a plane leading outward and upward from the edge of the take-off and landing area under which adequate areas may have to be located to permit a safe landing in the event of an emergency.

Autotation: a power-off flight condition when the engine is not driving the main and tail rotor systems. The main rotor is driven only by the action of the relative wind providing a means to maneuver to a safe, low speed landing in an emergency. Autotation is a built-in safety factor, the equivalent of a power-off glide in an airplane.

Downwash: a variable volume of air moved downward by the rotating main rotor, resulting in a flow or airblast spilling outward as the air strikes the ground and is re-circulated by the main rotor.

Ground Effect: an improvement in flight capability that develops whenever the helicopter flies or hovers near the ground or other surface. It results from the cushion of denser air built up between the ground and the helicopter by the air displaced downward by the rotor.

Helicopter: a rotary-wing aircraft that depends principally upon the lift generated by one or more power-driven rotors rotating on substantially vertical axes for its support and motion in the air. The helicopter can hover, fly backward and sideways, in addition to forward flight. A helicopter is a V/STOL -- a vertical and/or short take-off and landing aircraft.

Heliport: an area, either at ground level or elevated on a structure, that is used for the landing and takeoff of helicopters. It can be a minimum facility or it can include some or all of the various facilities useful to helicopter operation such as helicopter parking, hangar, waiting room, fueling and maintenance equipment.

Helistop: a minimum facility heliport, either at ground level or elevated on a structure for the landing and takeoff of helicopters but without such auxiliary facilities, as waiting room, hangar, parking, etc.

Off-Heliport-Landing Site: a take-off and landing area intended for temporary or occasional helicopter use but not formally designated as a heliport.

Peripheral Area: a safety zone that provides an obstruction-free area on all sides of the landing and take-off area.

Taxiing: a powered movement of an aircraft one area to another, usually just before takeoff or after landing. Helicopters equipped with skid-type landing gear are taxied in a hovering position a few feet above the ground; this is known as air or hover taxiing. Larger helicopters are usually equipped with wheel landing gear; such ships can ground taxi as well as hover taxi.

Touchdown Pad: that part of the landing or takeoff area where is designated that the helicopter alights.

* * * *

An airplane lands and then stops -- a helicopter stops and then lands.
HELIPORT CHECK LIST

1. Recognize the need for a heliport.

2. Review governmental regulations -- city, county, state and federal -- regarding zoning city planning, building codes, ordinances, etc. to assure proper compliance.

3. Request from a Federal Aviation Administration District Office a copy of the Advisory Circular (AC 150/5390-1B) Heliport Design Guide.

4. Select a suitable heliport site or sites.

5. Contact a local helicopter or helicopter manufacturer's representative to check the operational feasibility of the proposed site.

6. Submit the required prior notice of proposed heliport development to the Federal Aviation Administration (FAA) Airports District office.

7. Discuss with helicopter operators and FAA representatives the selection of air routes and operating procedures.

8. Consult qualified architect or engineer to ensure compliance with design, construction and technical requirements.

9. And if required, submit application on proposed helicopter operations and heliport location for license or approval together with request for local re-zoning if needed.

This is a suggested check list to follow in establishing a heliport or helistop. As situations vary in different parts of the country, all these suggested steps may not be necessary. For example, a ground level area on a parking lot or lawn or an open rooftop area may be available requiring none or a minimum construction. In many instances, the area need only be marked, fenced and a wind sock installed.

* * * * *

St. Joseph's Hospital in Port Charlotte, Florida is the first in the country to install the new FAA approved Hospital Heliport Marker—a red H on a White Cross.

The Peoria Journal Star's rooftop hangar provides easy access to the rooftop heliport.
The Cobo Hall Convention Center’s heliport in Detroit, MI (the open deck area adjacent to the 1200-car roof parking) is probably the world’s largest public heliport.

In Edina, Minnesota, the Fairview-Sotudale Hospital’s ground level heliport.
In Washington, D.C., the Metropolitan Police helicopters are based at Washington National Airport, and can operate from these three strategically located District rooftop heliports.

Sikorsky S-58T helicopter rises from an offshore oil platform in the Atlantic Ocean off the coast of Brazil.
