1984 AIA Directory of Heliports & Helistops

Published by Aerospace Industries Association of America, Inc.
A rendering of New York City's Wall Street Heliport, selected by the Federal Aviation Administration to be one of four model IFR public heliports in the country. This pier site, now under construction/expansion is scheduled for initial operating capability in the spring of 1986.

(Cover) At Battery Park in New York City, New York, the World Trade Center public use Helistop. (Heliport Systems, Inc.)
The 1984 edition of the AIA Directory of Heliports & Helistops in the United States, Canada and Puerto Rico, compiled by The Aerospace Industries Association, reveals a continuing increase in the number of these facilities. (The last published Directory was dated 1981.)

This 1984 Directory lists 4,232 heliports & helistops, compared to 3,985 in the 1981 Directory — an increase of 6 percent.

There is a notable increase in the number of Hospital Helistops. In 1981, there were 906. There are 1,071 reported in 1984. This represents more than an 18 percent increase. It also represents an impressive increase over the 1965 total of 34.

Of the 4,232 heliports & helistops, 384 are rooftop and 3,848 are ground level. In addition, there are facilities on the 199 U.S. offshore mobile oil rigs and the 62 oil platforms in the Gulf of Mexico and other U.S. coastal areas.

Of the 4,232 heliports & helistops listed only 333 (8 percent) are public use — down from the 1981 total of 348.

There are 2,789 private or prior permission facilities. These, as well as government (police and fire departments) are, of course, available for rescues and other emergencies.

The increase in the number of heliports & helistops reflects not only greater activity in traditional employment of the helicopter, but also a growing variety of business uses and destinations. For example, in addition to the hospitals, police/fire departments, banks, newspaper and TV stations, there are more of these facilities now at garages, inns, motels, hotels, shopping centers, department stores, convention centers, nuclear plants, colleges, universities, restaurants, utility, insurance, steel, construction, mining companies, cosmetic firms and even prison farms and zoos.

But more public heliports & helistops are needed now. City center and suburban ground level or rooftop facilities are essential to permit the point-to-point transportation above ground traffic and below airline traffic which only the helicopter can provide. Today, in some metropolitan areas, public helistops (like bus stops) provide ready access to downtown business districts.

Today, a metropolitan area without public heliports & helistops is lacking the full potential of a balanced and complete transportation system. Heliports & helistops should be provided on or adjacent to any public building built today. Chicago and Los Angeles City Ordinances require rooftop emergency helicopter emergency landing areas on high rise buildings that ground fire-fighting equipment cannot reach — when the only way out is up.

Directory information is provided by the State Departments of Transportation or Aeronautics Commissions, the Federal Aviation Administration and the Canada Map Office, Department of Mines and Resources.

Hospital Heliport & Helistop Section

The number of Hospital Heliports & Helistops increased to 1,170 in 1984. This represents an increase of more than 18 percent over the 905 reported in 1981.

Today, 78 of these hospitals operate helicopter ambulance services, compared to the 46 operating in 1981. This is approximately a 70 percent increase.

In addition, State Police/Departments of Transportation in California, Delaware, Illinois, Maryland, New Jersey, New York, Pennsylvania and Virginia's Fairfax County, provide emergency helicopter ambulance service for residents of the state.

In Washington, D.C., the U.S. Park Police helicopters serve the city's hospital helistops and operate as backup for hospitals in Maryland and Northern Virginia.

There are 23 other states that have one or more agencies operating ambulance helicopters.

In Tampa, Florida, a Suncoast Helicopters ambulance lands at the Hillsborough county Emergency Medical Services Headquarters Helistop.

GLOSSARY

APPROACH AND DEPARTURE PATHS: The flight track of the helicopter as it approaches or departs from the heliport’s designated take-off and landing area.

AUTOTATION: A power-off flight condition when the engine is not driving the main and tail rotor systems. The main rotor is driven only by the action of the relative wind providing a means to maneuver to a safe, low speed landing in an emergency. Autotation is a built-in safety factor, the equivalent of a power-off glide in an airplane.

DOWNWASH: A variable volume of air moved downward by the rotating main rotor, resulting in a flow or airblast spilling outward as the air strikes the ground and is re-circulated by the main rotor.

GROUND EFFECT: A cushion of denser air built up between the ground and the helicopter by the air displaced downward by the rotor. An improvement in flight capability that develops whenever the helicopter flies or hovers near the ground or other surface.

HELICOPTER: A rotary-wing aircraft that depends principally upon the lift generated by one or more power-driven rotors rotating on substantially vertical axes for its support and motion in the air. The helicopter can hover, fly backward and sideways, in addition to forward flight. A helicopter is a V/STOL — a vertical and/or short take-off and landing aircraft.

HELIPORT: An area, either at ground level or elevated on a structure for the landing or takeoff of helicopters. It can include some or all of the various facilities useful to helicopter operation, such as fuel, maintenance, helicopter parking, hangar and waiting room.

HELISTOP: A minimum facility heliport, either at ground level or elevated on a structure for the landing and takeoff of helicopters, but without such auxiliary facilities as fuel, maintenance, hangar and waiting room. A Helistop (like a bus stop) is established solely for the boarding and discharging of passengers. However, as some Helistops, minimum short term helicopter parking may be available.

HOVER: A flight characteristic peculiar to helicopters and certain other aircraft which enables them to remain motionless above a fixed point on the earth’s surface.

INSTRUMENT FLIGHT RULES (IFR): Rules that govern procedures for conducting instrument flight.

OFF-HELIPORT-LANDING SITE: A take-off and landing area intended for temporary or occasional helicopter use but not formally designated as a heliport.

PERIPHERAL AREA: A safety zone that provides an obstruction-free area on all sides of the landing and take-off area.

TAXIING: A powered movement of an aircraft from one area to another, usually just before take-off or after landing. Helicopters equipped with skid-type landing gear are taxied in a hovering position a few feet above the ground; this is known as air or hover taxiing. Larger helicopters are usually
equipped with wheel landing gear; such ships can ground taxi as well as hover taxi.

**TOUCHDOWN PAD:** That part of the landing or take-off area where it is designated that the helicopter alight.

**UNICOM:** An air-to-ground radio communication facility providing advisory information on airport and heliport services and utilization. Location and frequencies of UNICOMS are shown on aeronautical charts and publications.

**VISUAL FLIGHT RULES (VFR):** Rules that govern procedures for conducting flight under visual conditions.

HELIPORT CHECK LIST

1. Recognize the need for a heliport.
2. Review government regulations — city, county, state and federal — regarding zoning city planning, building codes, ordinances, etc. to assure proper compliance.
4. Select a suitable heliport site or sites.
5. Contact a local helicopter operator or helicopter manufacturer’s representative to check the operational feasibility of the proposed site.
6. Discuss with helicopter operators and FAA representatives the selection of air routes and operating procedures.
7. With their help, submit the required “Notice of Landing Area Proposal” FAA Form 7480-1 to the local FAA Airports District Office.
8. Consult qualified architect or engineer to ensure compliance with design, construction and technical requirements.
9. And if required, submit application on proposed helicopter operations and heliport location for license or approval together with request for local re-zoning if needed.

This is a suggested check list to follow in establishing a heliport or helistop. As situations vary in different parts of the country, all these suggested steps may not be necessary. For example, a ground level area on a parking lot or lawn or an open rooftop area may be available requiring none or minimum construction. In many instances the area need only be marked, fences, and a wind sock installed.

*********

SPECIAL FAA ADVISORY TO HELIPORT OWNERS/OPERATORS

Some heliports and helistops listed in this directory are facilities which are not on record with the Federal Aviation Administration (FAA). Operators and owners are reminded of their responsibilities under Part 157, Notice of Construction, Alteration, Activation, and Deactivation of Airports, of the Federal Aviation Regulations. Completion of a Notice of Landing Area Proposal, FAA Form 7480-1, notifies the FAA of your facility and will result in a FAA airspace determination based on safe and efficient use of airspace. Failure to notify the FAA could result in conflicts in airspace use and affect the FAA’s ability to assess airspace requirements for proposed new landing facilities and obstructions to air navigation. Copies of FAA Form 7480-1 may be obtained from the nearest FAA Airports District Office or Regional Office.
Please send _____ copy (copies) of the 1984 AIA DIRECTORY OF HELIPORTS/HELISTOPS IN THE UNITED STATES, CANADA AND PUERTO RICO at $7.95 each, check in the amount of _____ is enclosed.

The 1984 edition of the AIA DIRECTORY OF HELICOPTER OPERATORS IN THE UNITED STATES, CANADA, MEXICO AND PUERTO RICO is now scheduled for publication in the fall.

The Directory listings are in four Sections: Commercial Operators, Corporate and Executive, Civil Government Agencies, and Helicopter Flight Schools.

Since 1960, this AIA Directory has reported the continuing growth of the helicopter industry.

Please send an Order Form for the 1984 AIA DIRECTORY OF HELICOPTER OPERATORS IN THE UNITED STATES, CANADA, MEXICO AND PUERTO RICO as soon as the publication date and price are announced.
